

Team Name: sdmay21-

Team Members: Jon Greazel, Harrison Majerus, Hayden Sellars, Joseph Strobel,
Nicholas Battani, Stefan Peng

Report Period: Oct 12-Oct 18

Summary of Progress in this Period

This week we worked hard on design diagrams and use case diagrams to visualize how our application will meet requirements. Burhan presented on Game Theory to give us a better understanding of the back end engine we will create. We also worked on the testing chapter for design document V2.

Pending Issues

We plan to meet Sunday @ 5pm to finalize design document V2 and submit.

Plans for Upcoming Reporting Period

We plan to start working ahead so we can have a working proof of concept of the application (probably simple computations performed on the back end) to prove node.js will work well with a python back end and give us a head start for next semester.
